

Adolescence

Veterinary Nurse appointment:

Now your pup is nearly six months old, things are starting to change; behaviour is changing, hormones are starting to kick in, it's time to come into the clinic and discuss puberty.

Make an appointment to see me to discuss age related topics, the benefits of de-sexing, weight control, nutrition, flea and worm products. I can also check for retained baby teeth or help address any questions you may have.

Dog behavioural consult:

Following my appointment Sandy, our Dog Behavioural Practitioner, will be available for a half hour appointment to discuss any behaviour concerns you may have. For example, the mental development stages approaching and the impact on your puppy's behaviour and ways we can help you navigate through this.

We look forward to seeing you!
