

Adolescence

Veterinary Nurse appointment:

Now your kitten is nearly six months old, things are starting to change; behaviour is changing, hormones are starting to kick in, it's time to come into the clinic and discuss puberty.

Make an appointment to see me to discuss age related topics, the benefits of de-sexing, microchipping, weight control, flea and worm products, nutrition or help address any questions you may have.

Cat behavioural consult:

Following my appointment Sandy, who has a passion for all things behavioural, will be available to discuss any concerns you may have. For example; ways we can help navigate through inappropriate markings, urination, scratching and household harmony.

We look forward to seeing you!
